

SACHILA DISSANAYAKE

Software Engineer

ABOUT ME

Computer Science undergraduate with hands on experience in backend development, REST API development, and real world software projects. Skilled in Python, Java, Node.js, DynamoDB, and Git based workflows, with a strong interest in backend engineering, DevOps, and scalable system development. Passionate about building practical software solutions, learning modern technologies, and working effectively in team based environments.

TECHNICAL SKILLS

- Python
- Java
- Node.js
- Kotlin
- CI/CD
- AWS

SOFT SKILLS

- Creativity
- Leadership
- Team Work
- Problem Solving
- Responsible
- Time Management

LANGUAGE

- English
- Sinhala

EXPERIENCE

Intern Software Engineer

2025 July - Present

Courtney Lanka (Private) Limited

During the internship, I focused on software development tasks, particularly contributing to the BTanium Live Tracking Project. My work involved enhancing Android application development, backend operations, API integrations, authentication systems, and database features using Node.js, Express.js, DynamoDB, Git, and REST APIs. I also collaborated on frontend integration and AWS deployment processes, gaining practical experience in debugging, teamwork, and real world software development practices.

EDUCATION

BSC (Hons) Computer Science

2024 January - Present

Informatics Institute of Technology - University of Westminster

Foundation Certificate in Higher Education

2023 May- 2023 December

Informatics Institute of Technology

A / Walisinghe Harishchandra College

2020 - 2022

A / Kekirawa Central College

2014 - 2019

PROJECTS

MAM Shop Management & Finance System

Developed an offline desktop based business management system for handling customer records, finance tracking, and payment management for a vehicle finance/shop business. The system was designed to support practical business workflows without depending on internet connectivity.

VirtuTask

Worked as a backend developer for a productivity and health habit tracking application developed using React.js and Node.js. Developed JWT authentication, REST APIs, and MongoDB integrations while collaborating in a team based software development environment.

Personal Finance Tracker

Developed a Python based finance management application that allows users to add, update, delete, and monitor financial transactions while generating summaries of financial activities for expense tracking.
